

AddisonMckee to exhibit at FABTECH with new Hydra-Green End former

Booth 3268, FABTECH International & AWS Welding Show, November 2-4, 2010
Georgia World Congress Center, Atlanta, GA, USA

AddisonMckee will showcase its newly-launched Hydra-Green series of endformers with an FM-150 ID/OD SP machine at FABTECH 2010. This new design has reduced noise, a smaller footprint, and lower power consumption; AddisonMckee has found that similar machines of this design have resulted in 30% less power consumption. The Hydra-Green series will be available for various end form applications such as I/O, Ram Form, Ram Spin, and Trim, with capacity up to 6" tubes.

AddisonMckee will also exhibit its DB75ESRB, a 76mm high-performance draw bending machine, which is designed for maximum productivity as demanded by today's industry. The AddisonMckee electric DataBend™ tube bending machines are clean and quiet, operating with reduced running and maintenance costs. With sophisticated programming control of machine axes, greater positional control and repeatability are achieved, producing high-quality bends. The electric range of DataBend™ machines is ideal for tight radii, thin wall, exotic materials and close tolerance components.

About AddisonMckee

AddisonMckee is globally renowned for the design, manufacture and supply of some of the world's finest tube bending and end forming technologies - for increasingly complex aviation, shipbuilding, heat exchanger and HVAC, power generation, furniture, automotive, truck, and other tubular component manufacture requirements.

AddisonMckee also offers highly innovative muffler and catalytic converter assembly solutions, hydraulic press machinery, plant automation and complete workcell integration.

In addition to these capabilities, a whole range of tooling and accessory options are also provided, as are comprehensive maintenance and service contracts, training and education programs and financial services. Where applicable, AddisonMckee is also able to offer customers the opportunity of machine rebuilds, refurbishment, and upgrades.

AddisonMckee is headquartered in the United States and in November, 2010, will re-open a manufacturing facility in Preston, UK to manufacture products for the European market. AddisonMckee customers are also supported by global engineering, sales and service support centers in Canada and China, with Asian operations being expanded in 2011.

AddisonMckee is principally owned by Albion Investors LLC, a New York-based private equity group.
